

TASK 2: REFLECTION NOTES

In this task, I created and updated my professional profiles on platforms such as GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose, including showcasing projects, networking with professionals, and practicing technical skills. I also created a GitHub profile README to introduce myself and highlight my interests. This task helped me understand how important it is to build a professional digital identity early in my academic journey and how these platforms can support future career opportunities.
